

Electrical Systems

More complex switches and circuits

What is an alarm system?

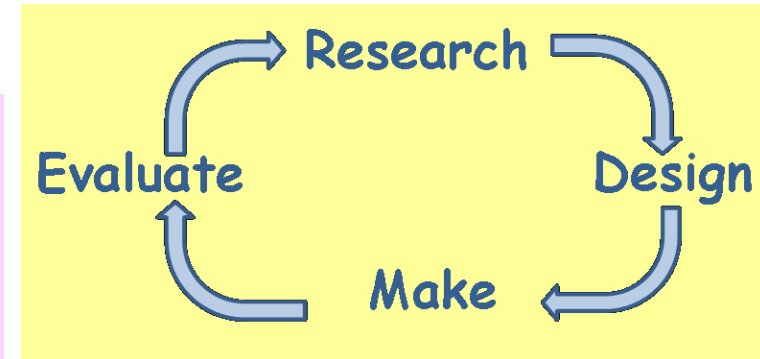

Vocabulary

Circuit: A closed loop that electrons can travel in.

Push-to-make: When you push, the electricity flows through the circuit, but when you release it the circuit is broken and the switch is off.

Sensor: A device that detects and responds to some type of input from the physical environment.

Toggle switch: A switch operated when a lever is pressed.

Designing and making:

Something for

Somebody for

Some purpose
